Agenda layout

01	Text and columns
02	Process and boxes
03	Figures, pictures and tables
04	Quotes, statements and sections

Text slide: the title states the point

- Default layout: `##` title and up to about five lines
- Use **bold** for the one phrase people should remember
- Nested points are smaller
  - Keep nesting to one level
- Sources go in the footer directive

Two columns

Left column

Markdown works inside the columns when a blank line follows each `<div>`.

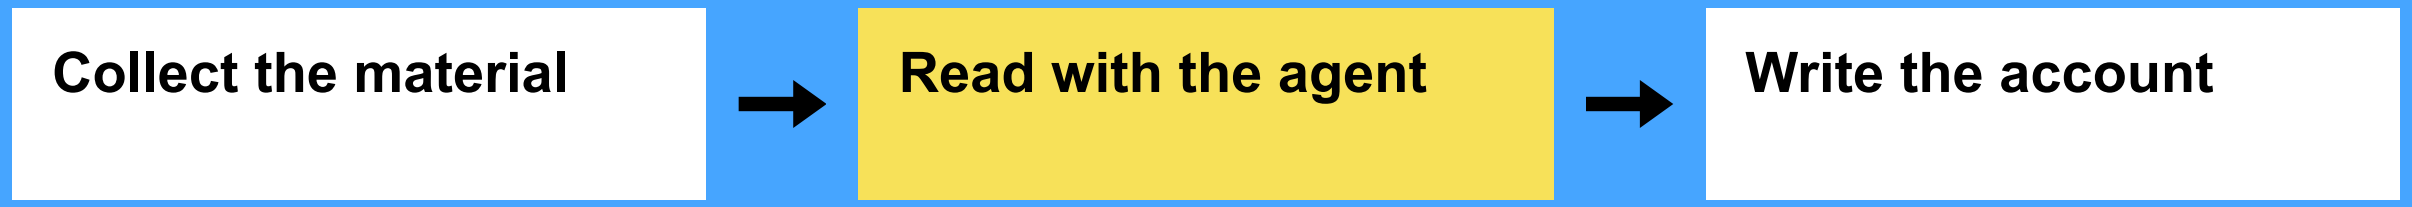

Right column

- Use `columns left-wide` or `columns right-wide` for a 2:1 split
- Three `<div>`s give three columns

A!

Process diagram on a blue slide

Interviews, field notes, logs

Check each suggestion against the passage

Record decisions and open questions

Process diagrams are real text: screen readers announce a list of three steps.

A!

Boxes on a red slide

White box

Use boxes to group a short point.

Yellow box

Highlight one box at most.

Outline box

For secondary content.

A!

Figure with a caption

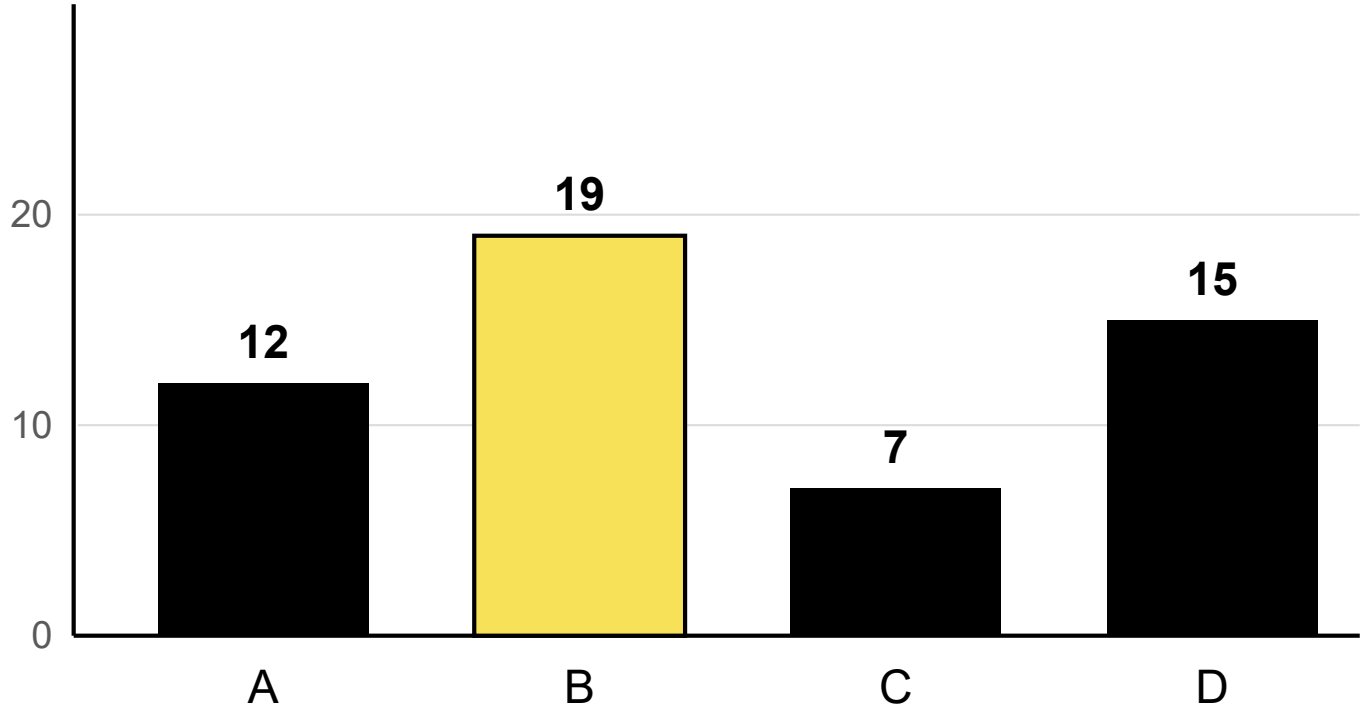

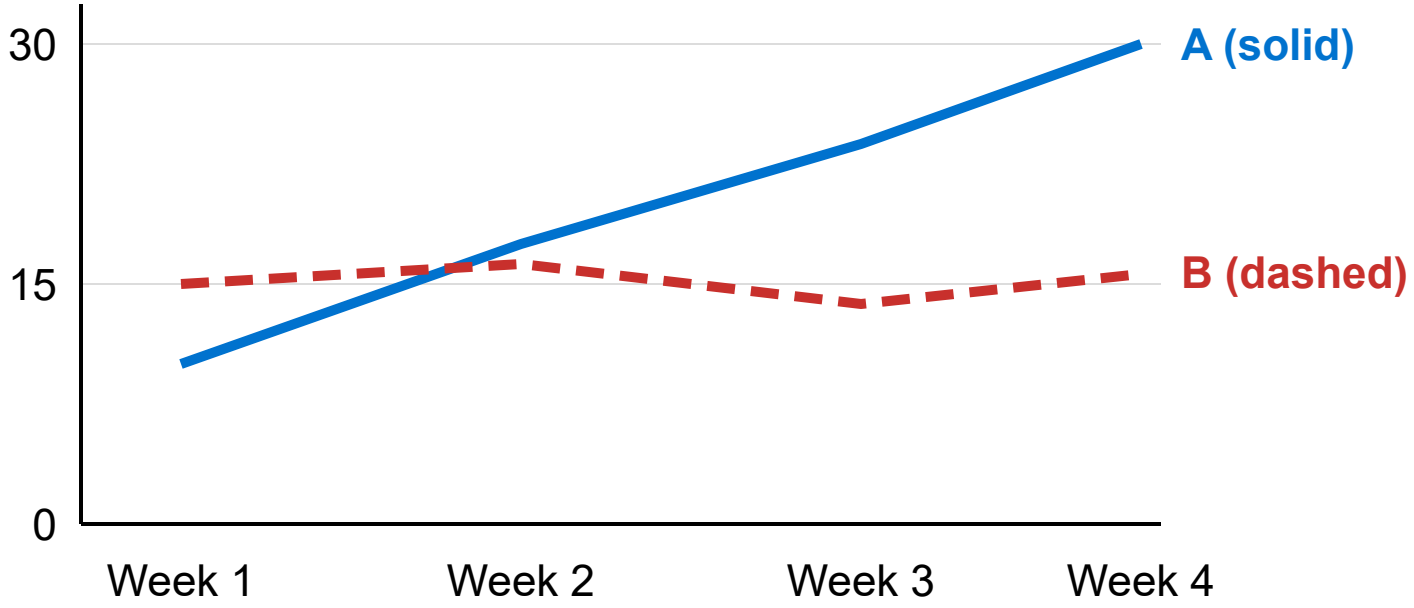

Figure 1. Example data, count per category. Category B is highlighted.

How alt text works

Alt text says what the figure shows and why it is here.

The full data goes in the notes as a figure description.

Free-form visual drawn in the slide

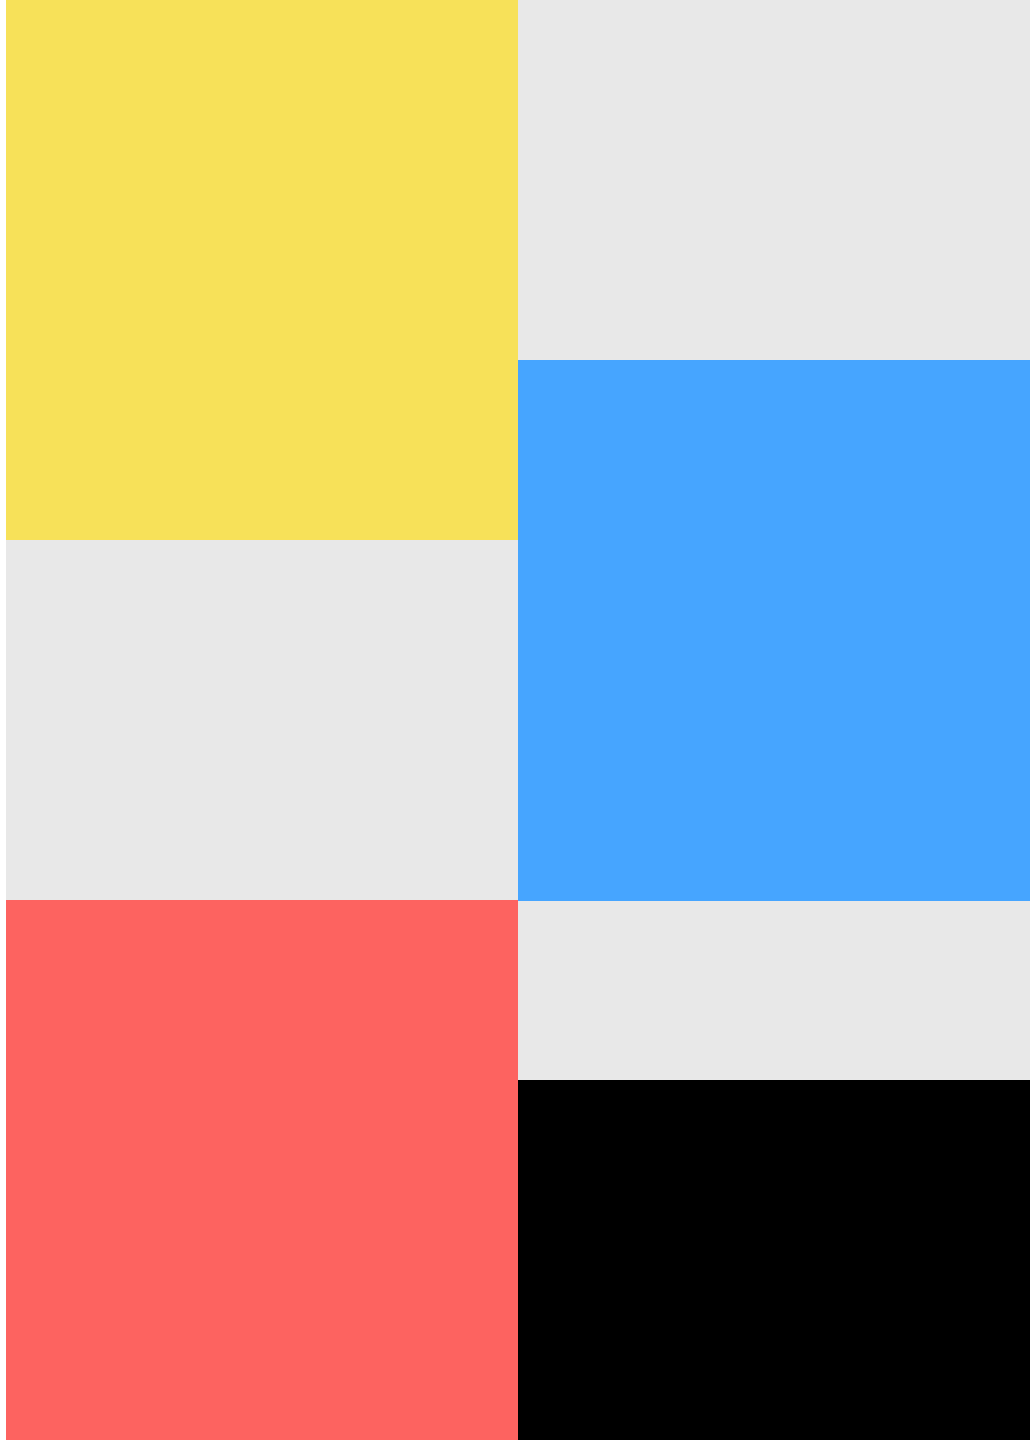

Any form that fits

Charts and diagrams can depart from the Aalto template.

Here: inline SVG, scoped styles, chart colours, direct labels and line styles so colour is not the only cue.

Picture slide

- `![bg right:40% alt text](file)` puts a picture on the right
- Words after the keywords become the alt text
- Keep pictures on the right so the logo stays clear

A!

Table

Format	Use it for	Screen readers
HTML	Presenting and sharing	Full support, with notes
PDF	Handouts and archiving	Text and bookmarks
PPTX	Only if someone requires it	Not readable (slides are pictures)

> “Quote participants’ exact words, including hesitations and repairs.”

Attribution line: participant code and context, e.g. P07, workshop 2

Section header on black

A short line about what this part covers

One sentence that you want the room to remember.

A!

Code and inline code

Run `start.bat` and choose **Build**, or:

```
npm run build -- "decks/2026-11-03 Example deck"
```
